

Git ignore

- explicitly tells Git which files and folders to ignore
- changes in ignored files and folders are ignored
- rules are defined in the separate file **.gitignore**
- **.gitignore** file itself must be committed

Git file statuses

Best practices for Git ignore

- build folders like **bin/**
- dependency folders like **node_modules/**
- compiled and log files like ***.pyc, *.log**
- hidden OS files like **Thumbs.db** or **.DS_Store**
